

Description

The TMP709 is a fully integrated, resistor-programmable temperature switch with a temperature threshold that is set by just one external resistor within the entire operating range. The TMP709 provides an open-drain, active-low output and has a 2.7V to 5.5V supply-voltage range. °C

The temperature threshold accuracy is typically $\pm 0.5^{\circ}\text{C}$, with a maximum of $\pm 3^{\circ}\text{C}$ (60°C to 100°C). The quiescent current consumption is typically $33\ \mu\text{A}$. Hysteresis is pin-selectable to 2°C or 10°C .

The TMP709 is available in a 5-pin SOT-23 and small DFN 6 package.
