顺翔诺 SXN

SMTC0660A Wire Wound Molded SMD Power Inductors

- 低直流电阻和超大电流的薄型设计
- 磁屏蔽型抗电磁干扰强适用于高密度安装
- 高可靠性,通过采用一体成型结构享有卓越 的抗震动性
- 由于复合结构,超低蜂鸣噪声
- 🌢 低损耗合金粉末压铸低阻抗,小寄生电容
- 能效高,可减少绕线的低直流电阻与磁芯的 涡流损耗
- 频率高达 3MHz
- 绝缘最大电压 30VDC
- 符合 RoHS, 无卤和 REACH
- 符合 AEC-Q200

◆用途:

- PDA,笔记本,台式机,服务器应用程序
- 大电流 POL 转换器
- 电池供电设备、基站
- 分布式电源系统中的 DC/DC 转换器

◆环境:

工作温度: -55℃ 至+155℃
 (包括线圈自身温升)

◆试验设备:

- 电感值: WK3260B 或同等仪器
- 电流: WK3260B+WK3265B 或同等仪器
- 直流电阻: Chroma 16502 或同等仪器

SMTC

◆产品型号:

Features:

- Low RDC and ultra-high current thin design
- Magnetic shielding type, strong anti-electromagnetic Interference, suitable for high- density installation
- High-reliability, High vibration resistance as result of newly developed integral construction
- Ultra Low buzz noise, due to composite construction
- Die-casting by low loss alloy powder low impedance.
 Small parasitic capacitance
- High efficiency Low DC resistance of winding and low eddy-current loss of the core
- Frequency up to 3MHz
- Absolute maximum voltage 30VDC
- RoHS, Halogen Free and REACH Compliance
- AEC-Q200 Compliant

Applications:

- PDA, notebook, desktop, server applications
- High current POL converters
- Battery powered devices. Base station
- DC/DC converters in distributed power systems

Environmental Data:

 Operating Temperature: -55℃ to +155℃ (Including coils self-temperature rise)

Test Equipment:

- L: WK3260B LCR meter or equivalent
- Isat & Irms: WK3260B+WK3265B or equivalent

- Saturation Current: DC current at which inductance drops 30% from its value without current.
- Temperature Rise Current: the actual value of DC current when the temperature rise is ΔT 40°C (Ta=25°C).
- Rated DC Current: The less value which is Isat or Irms.
- Special remind: Circuit design, component, PCB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified in the end application.
- Saturation current VS temperature rise current curve

◆推荐回流焊温度曲线

SXN-IIIIF新港

Recommended reflow soldering curve:

The recommended reflow conditions as above graph, is set according to our soldering equipment. DUE to various manufactures may have different reflow soldering equipment, products, process conditions, set methods. And so on, when setting the reflow conditions, Please adjust and confirm according to users' environment/equipment.

使用注意事项

REMINDERS FOR USING THESE PRODUCTS

● 保存时间为12 个月以内,保存条件(温度5~40°C以下、湿度35 ~ 66%RH 以下),需充分注意。 若超过保存时间,端子电极的可焊性将可能老化。

The storage period is within 12 months. Be sure to follow the storage conditions (temperature: 5~40°C, humidity: 35 to 65% RH or less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate.

• 请勿在气体腐蚀环境(盐、酸、碱等)下使用和保存。

Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).

手上的油脂会导致可焊性降低,应避免用手直接接触端子。

Don't touch electrodes directly with bare hands as oil secretions may inhibit soldering Always ensure optimum conditions for soldering.

• 请小心轻拿轻放,避免由于产品的跌落或取出不当而导致的损坏。

Please always handle products carefully to prevent any damage caused bydropping down or inappropriate removing.

• 端子过度弯曲会导致断线,请不要过度弯曲端子。

Don't bend the terminals with excessive stress in case of any wire fracture.

• 不要清洗产品, 如需要清洗时请联系我司。

Don't rinse coils by yourself and please contact SXN if necessary.

请勿将本产品靠近磁铁或带有磁力的物体

Don't expose the products to magnets or magnetic fields

- 在实施焊接前,请务必进行预热。预热温度与焊接温度及芯片温度的温度差要在150°C 以内。
 - Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C.
- 安装后的焊接修正应在规格书规定的条件范围内。若加热过度可能导致短路、性能降低、寿命减少。 Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.
- 装置会因通电而自我发热(温度上升),因此在热设计方面需留有充分余地。
 Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.
- 非磁屏蔽型在基板设计时需注意配置线圈,受到电磁干扰可能会导致误动作。
 Carefully lay out the coil for the circuit board design of the non-magnetic shield type. A malfunction may

occur due to magnetic interference.
